    <h2 style="color: rgb(105, 50, 11);">We Provide Features Like....</h2>

    <ol style="color: saddlebrown;" type="i">

        <li>

            <b>Watch-to-watch alerts:</b> When one smartwatch's button is pressed, the connected watch would receive a prompt and provide a vibration, buzz, or other alert to signal an action or notification.

        </li>

        <li>
```

Remote trigger functionality: The button press on one watch could trigger a function on the other watch, such as starting a timer, changing a watch face, or even sending a pre-set message.

Enhanced "Find My" features: A watch could be used to trigger a sound or vibration on the paired watch, making it easier to locate.

Gesture control: Buttons or specific gestures on one watch could be mapped to control functions on the other, like turning music volume up or down.

Simplified pairing: The system could involve a unique pairing process where two watches are linked directly for exclusive communication.

And much more!

<h2 style="color: rgb(105, 50, 11);">Some limitations that we're still working on...</h2>

<ul style="color: saddlebrown;">

Limited range: These direct connections are typically short-range, requiring the two watches to be in close proximity to each other.

Power consumption: Direct communication between two devices can be a drain on battery life.

Proprietary systems: This type of direct, watch-to-watch feature set is not common on all smartwatches and might only be available in specific brands or models, often within the same ecosystem.

Volpi is thrilled to announce the launch of the most awaited watch!!

Care Band

This advanced smartwatch feature provides a tangible, immediate form of communication, where pressing a button on one device triggers a distinct vibration on the connected partner watch, serving as a discreet way to send "I'm thinking of you" signals, request attention, or give a quick reminder to a loved one without needing to look at their phone.

Price: ~~Rs. 4000~~
Rs. 3599

Price: ~~Rs. 4000~~
Rs. 3599

We Provide Features Like....

i. **Watch-to-watch alerts:** When one smartwatch's button is pressed, the connected watch would receive a prompt and provide a vibration, buzz, or other alert to signal an action or notification.
ii. **Remote trigger functionality:** The button press on one watch could trigger a function on the other watch, such as starting a timer, changing a watch face, or even sending a pre-set message.
iii. Enhanced "Find My" features: A watch could be used to trigger a sound or vibration on the paired watch, making it easier to locate.
iv. **Gesture control:** Buttons or specific gestures on one watch could be mapped to control functions on the other, like turning music volume up or down.
v. **Simplified pairing:** The system could involve a unique pairing process where two watches are linked directly for exclusive communication.
   And much more!

Some limitations that we're still working on...

- **Limited range:** These direct connections are typically short-range, requiring the two watches to be in close proximity to each other.
- **Power consumption:** Direct communication between two devices can be a drain on battery life.
- **Proprietary systems:** This type of direct, watch-to-watch feature set is not common on all smartwatches and might only be available in specific brands or models, often within the same ecosystem.

Model	Key Features
